

What to expect from your vaccine

The flu is a serious disease, especially for older adults.

The flu can make anyone very sick. For older adults, the risk is higher. The flu can lead to serious problems, like pneumonia or a hospital stay.

Getting vaccinated each year helps prevent the flu and lowers your risk of serious illness and complications if you do get sick.

mFLUSIVA—a flu vaccine from Moderna

mFLUSIVA (pronounced “em-floo-SEE-vah”) is a flu vaccine for adults aged 50 and older.

In clinical trials, mFLUSIVA was compared against standard-dose and high-dose flu vaccines

- In one study comparing mFLUSIVA to Fluarix®, mFLUSIVA prevented more cases of flu for adults aged 50 and older
- In another study comparing mFLUSIVA to Fluzone® High-Dose, mFLUSIVA helped the body build a stronger immune response in adults aged 65 and older
- For adults aged 65 and older, mFLUSIVA was approved based on early study results. Additional research is ongoing to confirm the clinical benefit

In these clinical trials, most side effects were mild to moderate and went away in about 2 days

In clinical trials, side effects were more frequent with mFLUSIVA than with these comparator flu vaccines.

There is a small chance that mFLUSIVA could cause a severe allergic reaction. The most common side effects included injection site reactions, tiredness, headache, and muscle and joint pain. These may not be all the possible side effects of mFLUSIVA. To learn more, see the Important Safety Information below and on the following pages.

Ask your doctor or pharmacist if mFLUSIVA is right for you.

What is mFLUSIVA (Influenza Vaccine, mRNA)?

mFLUSIVA is an mRNA vaccine for adults age 50 and older that helps protect against flu. Vaccination with mFLUSIVA may not protect all people who receive the vaccine.

For adults age 65 and older, mFLUSIVA was approved based on study results showing that mFLUSIVA helped the immune system respond. Additional research is ongoing to confirm the clinical benefit.

mFLUSIVA does not contain the influenza viruses. mFLUSIVA cannot give you flu.

mFLUSIVA does not contain egg protein, antibiotics, or preservatives. Cells are not used in mFLUSIVA's manufacturing process.

Please see Page 2 for additional Important Safety Information.

IMPORTANT SAFETY INFORMATION

You should not get mFLUSIVA if you had a severe allergic reaction to any ingredient in mFLUSIVA.

Tell your healthcare provider about all of your medical conditions, including if you:

- have any allergies or have had a severe allergic reaction after receiving a previous dose of any other vaccine
- have had Guillain-Barré syndrome (severe muscle weakness) after getting an influenza vaccine
- are immunocompromised or are on a medicine that affects your immune response
- are breastfeeding, pregnant or plan to become pregnant
- have ever fainted in association with an injection

What are the risks of mFLUSIVA?

Severe allergic reactions are rare but can happen after vaccination with mFLUSIVA. If a severe allergic reaction occurs, it would usually happen within minutes to one hour after a dose of mFLUSIVA. Because of this, your healthcare provider may ask you to stay for a short time after your vaccination.

Side effects that have been reported in clinical trials with mFLUSIVA include:

Injection site reactions: pain, tenderness and swelling of the lymph nodes in the same arm as the injection, swelling (hardness), and redness.

General side effects: fatigue, headache, muscle pain, joint pain, chills, nausea or vomiting, and fever.

These may not be all the possible side effects of mFLUSIVA. Ask your healthcare provider about any side effects that concern you. You may report side effects to **Vaccine Adverse Event**

Reporting System (VAERS) at 1-800-822-7967 or <http://vaers.hhs.gov>.
